DATE MAILED: 12/08/2005

Please find below and/or attached an Office communication concerning this application or proceeding.

<b>Office Action Summary</b>	<b>Application No.</b> 09/837,387	<b>Applicant(s)</b> GONZALEZ ET AL.	
	<b>Examiner</b> Kevin Y. Kim	<b>Art Unit</b> 2638	

**-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --**

### Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

### Status

- 1) ☒ Responsive to communication(s) filed on 14 September 2005.
- 2a) ☐ This action is FINAL.                      2b) ☒ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

### Disposition of Claims

- 4) ☒ Claim(s) 1-3,5-7 and 9-12 is/are pending in the application.
- 4a) Of the above claim(s) \_\_\_\_\_ is/are withdrawn from consideration.
- 5) ☐ Claim(s) \_\_\_\_\_ is/are allowed.
- 6) ☒ Claim(s) 1-3,5,9-12 is/are rejected.
- 7) ☒ Claim(s) 6 and 7 is/are objected to.
- 8) ☐ Claim(s) \_\_\_\_\_ are subject to restriction and/or election requirement.

### Application Papers

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☐ The drawing(s) filed on \_\_\_\_\_ is/are: a) ☐ accepted or b) ☐ objected to by the Examiner.  
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).  
Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

### Priority under 35 U.S.C. § 119

- 12) ☐ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☐ All    b) ☐ Some \* c) ☐ None of:
1. ☐ Certified copies of the priority documents have been received.
  2. ☐ Certified copies of the priority documents have been received in Application No. \_\_\_\_\_.
  3. ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).

\* See the attached detailed Office action for a list of the certified copies not received.

**DETAILED ACTION**

***Response to Amendment***

1. The after-final amendment filed on September 14, 2005 had been denied entry because a print irregularity with respect to the limitation “over a time window,” which appeared to have been deleted. In a telephone conversation with Mr. Andrew Waxman, Attorney on record for applicants, the examiner was informed of the print irregularity and agreed that applicant complied with the previous Office action by combining the subject matter of claim 4 into claim 1, where the limitation “over a time window” was not deleted. Likewise, claim 8 into claim 5 and claim 13 into claim 9. Furthermore, it was agreed that the finality of the Office action of April 14, 2005 is withdrawn and a new action is provided herewith.
2. Upon a review of the prior art, Piirainen (US pat. 6,748,031), it has been discovered that the weighted average of channel estimates called for in claims 4, 8 and 13 is also described in the patent. See the ground of rejection set forth below.

***Claim Rejections - 35 USC § 102***

3. Claims 1-3, 5, 9-12 are rejected under 35 U.S.C. 102(e) as being anticipated by Piirainen (US 6,748,031, previously cited).

Claims 1 and 2.

Piirainen discloses a method of estimating a communication channel (see Fig.2), comprising;

“determining at least first and second confidence levels that a transmitted data symbol has respective first and second values based on a received data

Art Unit: 2638

symbol corresponding to the transmitted data symbol,” ( see col. 3, line 66 ~ col.4, line4 describing the confidence levels or probabilities of a received symbol  $y$  having one of a plurality of values  $x$ );

“generating a channel estimate based on the first and second confidence levels over a time window of predetermined width,” (see col.4, lines 32-49 describing the calculation of a channel estimate using the probabilities of a received symbol  $y$  having one of a plurality of values  $x$ , and col.3, lines 51-54) and

generating an overall channel estimate by obtaining a weighted average of a plurality of channel estimates. (see col. 4, lines 60-63)

### Claim 3.

The calculation of a channel estimate is based on the confidence levels of the received symbols since it used the mean of the probabilities/confidence levels as well as the received data symbol  $y_k$ . See the equation at col.4, lines 35-40.

### Claim 5.

Referring to Fig.2, Piirainen discloses a method of making a channel estimate, comprising:

“generating a confidence factor according to a confidence function and a received data symbol, the confidence factor representing a confidence level that a transmitted data symbol corresponding to the received data symbol has a

Art Unit: 2638

particular symbol value,” (see col. 3, line 66 ~ col.4, line 4 describing probabilities of a received symbol  $y$  having one of a plurality of values  $x$ , i.e., the confidence factor according to “a confidence function,” i.e., a Viterbi detecting function, see col.3, line 66 ~ col.4, line 4);

“generating a channel estimate based on the confidence factor and the received data symbol over a time window of predetermined width.” (see col.4, lines 32-49 describing the calculation of a channel estimate using the probabilities of a received symbol  $y$  having one of a plurality of values  $x$  and col.3, lines 51-54.) and

“generating an overall channel estimate by obtaining a weighted average of a plurality of channel estimates.” (see col. 4, lines 60-63)

#### Claim 9.

Referring to Fig.2, Piirainen discloses a method of making a channel estimate, comprising:

“determining a strength indicator based on a received data symbol corresponding to a transmitted data symbol, a value of the strength indicator indicating a likelihood that the transmitted data symbol is a particular value,” (see col. 3, line 66 ~ col.4, line 4 describing probabilities of a received symbol  $y$  having one of a plurality of values  $x$ , i.e., “a strength indicator” of the received symbol);

“generating a channel estimate based on the confidence factor and the received data symbol over a time window of predetermined width  $l$ .” (see col.4, lines 32-49 describing the calculation of a channel estimate using the probabilities of a received symbol  $y$  having one of a plurality of values  $x$  and col.3, lines 51-54) and

Art Unit: 2638

“generating an overall channel estimate by obtaining a weighted average of a plurality of channel estimates.” (see col. 4, lines 60-63)

Claims 10 and 11.

Piirainen teaches a binary modulation, one of which is the bi-phase shift keying, where a transmitted symbol obtains the values of 1 or -1. See col. 4, lines 22-24. Thus, the strength indicator, i.e., a numeral representation of probability, approaches a value of 1 the greater the likelihood that the transmitted data symbol was 1 and approaches a value of -1 the greater the likelihood that the transmitted data symbol was -1.

Claim 12.

The claim calls for performing the probability determinations and the strength indicator determination according to a predetermined function. Piirainen teaches describing computing the probabilities according to a Viterbi detecting function. See col.3, line 66 ~ col.4, line 4

***Allowable Subject Matter***

4. Claims 6 and 7 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Kevin Y. Kim whose telephone number is 571-272-3039. The examiner can normally be reached on 8AM --5PM M-F.

Art Unit: 2638

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Kenneth Vanderpuye can be reached on 571-272-3078. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see <http://pair-direct.uspto.gov>. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
